

EDUCATION

Government College of Engineering, Aurangabad

Bachelor of Technology; GPA: 8.1

Aurangabad, India

June 2017 - June 2021

SKILLS SUMMARY

- **Languages:** Java (8/21), TypeScript, Python, Scala, Lua, C++
- **Frameworks:** Spring Boot, Spring Security, Hibernate, NestJS
- **Message Queues:** Kafka 2.8, RabbitMQ, JMS
- **Frontend:** Vue.js, Angular, JavaScript
- **Databases:** Oracle 19C, PostgreSQL, Redis 6.x, Cassandra
- **Architecting:** Algorithms, Data Structures, System design
- **Cloud & Containers:** AWS (EKS, S3, RDS), Azure, Docker, Kubernetes
- **Concurrency:** Multithreading
- **Security & IAM:** OAuth2, OpenID Connect (OIDC), JWT, Keycloak, SSO, CIBA, Non-CIBA, MFA
- **Architecture:** Microservices, Event-Driven, Load Balancing, RESTful APIs
- **Observability:** Grafana, Prometheus, OpenSearch, VictoriaLogs
- **Dev Tools:** Git, Maven, Jenkins, JUnit, Claude AI, Cursor
- **Performance** Caching (Redis), Query Optimization, Multithreading

WORK EXPERIENCE

- Team Lead | Accelya

Novemeber 2025

December 2021-

 - **Architected microservices platform** using Spring Boot 2.7 & Kafka 2.8 scaled to **1.2M daily transactions** with **99.9% uptime** supporting \$45M annual cargo operations
 - **Tuned Oracle queries & Redis caching** delivered **70% latency reduction** (450ms to 135ms) throughout **7+ distributed services**
 - **Coded 25+ high-performance RESTful APIs** boosted data throughput by **3x** serving **50K+ concurrent users** with sub-200ms response times
 - **Designed fault-tolerant architecture** processed **1M+ weekly transactions** with **zero data loss** during 99.2% system availability
 - **Implemented enterprise security suite** (OAuth2, JWT, Keycloak SSO) eliminated security incidents by **85%** for **500+ enterprise users**
 - **Deployed event-driven system** with Kafka→ lowered inter-service latency by **60%** handling **10K+ weekly events**
 - **Configured CI/CD pipeline** with Jenkins & Docker cut deployment time from **45 minutes to 8 minutes** with **zero-downtime releases**
 - Engineered Angular UI components tightly integrated with Spring Boot microservices, improving API-to-UI data rendering speed by 20% for global cargo operations teams.
- FullStack Engineer | LotusFlare

November 2025 – Present

 - Developing carrier-grade Identity, Consent Management, and Application Registry platforms serving millions of telecom subscribers and partner applications.
 - Designed and implemented event-driven microservices using Java, TypeScript, Kafka, and Vue.js to support real-time authorization, consent lifecycle management, and asynchronous partner integrations.
 - Implemented OAuth2/OIDC, JWT, CIBA, and non-CIBA authorization flows, enabling secure subscriber authentication, delegated authorization, and enterprise SSO capabilities.
 - Developed partner onboarding and application registry services, including client registration, credential provisioning, scope management, and API access governance.
 - Designed scalable data models using Cassandra and PostgreSQL for high-volume identity and consent workloads with high availability and fault tolerance.
 - Improved platform throughput by 2.5× and achieved sub-100ms authorization latency through Redis caching and asynchronous processing optimizations.
 - Leveraged AI-assisted engineering tools (Claude, Cursor) for development, production debugging, log analysis, and accelerated issue resolution across distributed systems.

PROJECTS

Tech Stack: Java 11, Spring Boot 2.7, Oracle 19C, Redis, Kafka 2.8, Docker, AWS, Angular

- Built order management APIs processing 25K+ daily orders shortened fulfillment workflow time by 45% through systematized validation
- Crafted offer integration APIs increased user engagement by 30% serving 15K+ daily offer requests with <100ms response time
- Created 20+ RESTful endpoints with Spring Boot 2.7 facilitated seamless communication spanning 8 microservices with 99.8% success rate
- Redesigned multithreading architecture enhanced concurrent processing by 200% handling 5K+ simultaneous requests under peak load
- Secured 70% latency reduction (450ms to 135ms) through JVM tuning, query optimization, and Redis caching implementation
- Constructed quality assurance pipeline, maintained 95%+ code coverage using Git workflows and JUnit 5 testing framework.
- Integrated UI with RESTful services, implemented shared components, and optimized state management for faster page rendering.

Price Influencer

September 23- Present

Tech Stack: Java 11, Spring Boot 2.7, Kafka, Redis, Oracle, Docker, AWS

- Orchestrated rule-based pricing engine automated pricing decisions for 8K+ daily flight offers within SAS network with 99.7% accuracy
- Engineered complex business logic processing 15+ pricing variables reduced manual pricing errors by 85% and accelerated revenue optimization
- Developed 12+ RESTful APIs using Spring Boot 2.7 powered seamless integration with 6 external systems including booking platforms and inventory management
- Accelerated asynchronous processing improved application throughput by 180% handling 3K+ concurrent pricing requests during peak booking hours
- Formulated comprehensive testing framework attained 92% code coverage using JUnit 5 and integration testing, reducing production bugs by 70%
- Managed airline-specific pricing rules established 25+ complex business scenarios including seasonal pricing, route-based adjustments, and inventory-driven pricing models

Identity, Authentication & Consent Platform & Application Registry (Telecom Domain)

Nov2025- Present

Tech Stack: Java 21, Spring Security 5.7, TypeScript, NestJS, Kafka, Cassandra, PostgreSQL, Redis, Keycloak, OAuth2, JWT, CIBA, Lua, AWS , Vue JS, Scala, Claude AI

- Developed a carrier-grade Identity, Consent Management, and Application Registry platform supporting telecom subscriber onboarding, partner integrations, and secure access to digital BSS services.
- Implemented **CIBA and Non-CIBA authorization flows** to enable **asynchronous, decoupled consent handling** across telecom partner and third-party service integrations
- Designed **Single Sign-On (SSO) and role-based access control (RBAC)** using Keycloak, supporting **subscriber, partner, and internal operator roles** across distributed microservices
- Optimized **authorization and token validation pipelines** using Redis caching, handling **high-volume subscriber traffic** with **sub-100ms latency** during peak usage
- Built centralized consent management capabilities for capturing, validating, storing, and revoking subscriber consent, ensuring regulatory compliance and auditable consent lifecycle management.
- Developed application registration and client onboarding services for partner applications, including client credential provisioning, scope management, API access governance, and application lifecycle administration.
- Implemented **multi-factor authentication (MFA), secure session lifecycle management, and token revocation**, significantly reducing unauthorized access across subscriber-facing channels
- Integrated AI-assisted debugging workflows to investigate production incidents, analyze logs, and accelerate issue resolution across distributed microservices and event-driven pipelines.

CERTIFICATES

- NPTEL Java Programming
- IBM Advanced Data Science Specialization | [View Certificate](#)
- Data Mining - University of Illinois Specialization | [View Certificate](#)
- IIT Kanpur Full Stack Development

RESEARCH PUBLICATIONS

Instructions with Complex Control-Flow Entailing Machine Learning IEEE/ACIS SNPD 2022 | [View Publication](#)
Applied reinforcement learning with attention-based encoding for handling multi-task instruction-following with complex control-flow scenarios

Leveraging Conditional GANs for Cosmic Microwave Background Separation IEEE/ACIS SERA 2024 | [View Publication](#)

Pioneered a GAN-based approach for CMB data separation, validated robustness against varied foreground models.

AWARDS & ACHIEVEMENTS

- Best Performer 2024 – Accelya Solutions | Recognized for outstanding contributions to project achievements
- 5-Star Coder on CodeChef | Earned global rank of 246 out of 29,626 participants
